

Medical Testing Marking Grid

Medical Testing			
Criterion	Mark	Comment	
A	4	Concise and focussed with original aims that are fulfilled. Well developed and coherent. Readable and complete.	
B	3	Appropriate presentation (although more variety would have been desirable).	
C	4	Creating own examples e.g., an entire "fictional" population vs. real-life situation. There is abundant evidence of PE, the links between the mathematics and real life seem genuinely to have been created by the student.	
D	3	Questioning style shows frequent critical reflection.	
E	6	Correct and thorough knowledge and understanding commensurate with SL.
